

Universe In A Jar

Make a light up jar that looks just like the universe!

From: <https://www.momdot.com/universe-jar-tutorial/>

Supplies:

[Glass jar](#) (recycled pickle jars work great!)

[Glow in the dark fabric paint](#) (various colors)

[Paint brush](#)

TIP: Use Tulip Glow Paint

Clean jar thoroughly and let dry. If you try to make your DIY universe jar with a wet jar, the paint won't stick.

Choose a couple of colors you want for your glowing **Universe jar** and squeeze a bit of each color onto a piece of scrap paper.

The best way to get an even covering is to dot the paint on with a paintbrush starting at the bottom and working your way up.

A faster way is to shake the paint brush in the jar to create a splatter paint effect.

Add larger dots for “Planets” in your universe. If you want to get creative, make a constellation or a comet!

Let your jar dry in the sun or under a bright light for at least 2 hours to charge the paint

Turn off the lights and enjoy your beautiful **Universe in a Jar** – can be used again and again!
